

Write a C program to check if two arrays are same or not.

Algorithm:

Step 1: Start

Step 2: Declare `int a[50], b[50], n1, n2, i, c=0;`

Step 3: Read the size of arrays for 2 arrays.
Using for loop.

Step 4: Read the array elements for both arrays
Using for loop

Step 5: Checking array condition for size

If ($n1 \neq n2$)

5.1 print ("The arrays are not equal")

Step 6: Logic to find

for ($i=0; i < n1; i++$)

if ($a[i] \neq b[i]$)

$c++;$

6.1. If ($c == 0$)

printf ("The arrays are same")

else

6.2 printf ("The arrays are different")

Step 7: Stop

Flowchart:
